

## Welcome to the first issue of Power Source!

We appreciate your business over the years. As many of you already know, we are here for you, helping to keep your operations running at peak efficiency, with some adjustments to meet new safety protocols during the current pandemic.

While social distancing has had its challenges, it has also served as a good reminder of the importance of staying connected. Power Source is our way of keeping you up to date on the services we offer, technical and industry news and training opportunities. We hope you find this first issue valuable—we will be reaching out on a regular basis going forward.

Stay well,  
Dave Howell, President

## Introducing IEC University

What started as one-off customer training has become so popular that we've made it part of our regular service offerings.

“Professor” Scott DeLapp (Skeeter) has mastered the full range of technical skills that he has developed over forty years, on the job, in real-world situations. His expertise includes: the principles of AC/DC electric motors, machine control panels, drives, troubleshooting of commercial and industrial rotating electrical equipment and OSHA/NFPA70E Arc Flash Safety & Compliance. Simply put, there are no schools that teach what Scott knows.

### Class Topics include:

- Electrical Safe Work Practices
- Variable Frequency Drives
- Arc Flash/NFPA70E Electrical Safety Training

### Class Overview:

- Class sizes are limited to 12, so everyone gets personal attention and hands-on time
- Full day classes include continental breakfast and lunch
- Students receive:
  - Class handbook to keep
  - Aptitude benchmarking at beginning and upon completion to demonstrate progress
  - Certificate of completion
  - Digital copies of tests for your records

## Special Offer

We will soon be offering in-person classes again, so watch out for special offers coming up.

Want Scott to come to you? [Ask us about onsite training.](#)

## Here's just a few things past students have to say:

"Best part of the class is the hands-on labs with the electrical panels."

"Very detailed and easy to learn! An eye-opener on safety practices."

"What I appreciated about Skeeter is his technical knowledge and real life work experience."

## IEC Named One of the Best Places to Work

Our team members are just as important to us as our partners, and we are proud to have been named one of the Best Places to Work: Central Valley by the Opportunity Stanislaus. The award is especially meaningful because it is the result of how our employees feel about working here.

## New Videos!

### Industrial Electrical Company and IRISS Thermography Windows

Protect your operations from unplanned downtime by inspecting your Switchgear using Infrared Thermography. It's accurate and safer!

[Learn more here.](#)

### Are IRISS Thermography Windows right for your Company?

your Switchgear should be considered one of your top assets, and thermography is the most effective tool for identifying potential failures—yet it is also the most dangerous. [Learn more about how our IRISS Windows](#) allows your employee to obtain the same picture without compromising Life Safety.

## About Us

We have developed from a family owned and operated company to a trusted industry leader by working as a partner with each client. A long list of clients already knows Industrial Electrical is an ally they can count on for everything from routine maintenance to emergency services, facility upgrades to top-to-bottom efficiency analysis.

Ready to see what Industrial Electrical can do for your industrial, commercial or manufacturing facility?
